Welcome & Overview

Sourced Jewellers CRM is the all-in-one system that runs your shop — it replaces separate spreadsheets, till systems and notebooks with one connected platform.

Everything in the business is linked together. When you ring up a sale, the system automatically reduces your stock, records the customer's purchase history, updates the day's takings, calculates staff commission, and — if the item was on consignment — flags that the supplier now needs paying. You enter information once and it flows everywhere it's needed.

What the system handles

SELL & SERVE

- Point of Sale checkout
- Deposit / layaway orders
- Trade-ins & part-exchange
- Printed & emailed receipts
- Customer profiles & VIP tiers

STOCK & SOURCE

- Product inventory
- Barcode scanning
- Suppliers & spend tracking
- Consignment management
- Documents & certificates

RUN & REPORT

- Profit & Loss reporting
- Commission & payroll
- Expenses & cash drawer
- Analytics & AI assistant
- Full audit trail

THE GOLDEN THREAD

A single sale touches **stock, the customer record, the day's figures, commission, and consignment settlements** — all automatically. That's the core idea behind the whole system: record it once, and it's everywhere.

Works on any device

The system runs in any web browser on a computer, tablet or phone. It can also be **installed as an app** on a device's home screen for quick access (see §20). The layout adapts to the screen size — the side menu collapses to icons on smaller screens.

Getting Started & Login

Every team member has their own login. The system always knows who is signed in, so every sale, edit and payment is recorded against the right person.

Signing in

SECURITY

Passwords are at least 6 characters. After **5 failed attempts** the account locks for **5 minutes**. Don't tick "Remember me" on a shared shop computer.

Changing your password

Open the **user menu** at the bottom of the side menu (your email and role badge), then choose **Change Password** — or go to **Settings → Account → Change Password**. Enter the new password twice (minimum 8 characters) and click **Update Password**. It takes effect immediately.

Light & dark mode

From the same user menu you can switch between **Light Mode** and **Dark Mode** to suit the lighting in the shop. Your choice is remembered on that device.

FIRST-TIME TOUR

New users are greeted with a short **Welcome tour** and a **Quick Start guide**. You can replay either of these any time from **Settings → Data → Onboarding** — handy when training a new starter.

03

Finding Your Way Around

Everything is reached from the menu down the left side of the screen. It's grouped into Core Operations, Sales, Financial and Admin. You only see the items your role is allowed to use.

CORE OPERATIONS	SALES	FINANCIAL & ADMIN
 Dashboard  Products · incl. PX Intake  Suppliers  Customers  Consignments  Deposits	 POS (Point of Sale) • My Sales • My Commission • Sold Items • Transactions · mgr+	 Expenses  Reports · owner  Analytics · owner  Settings · owner

Global search — find anything, fast

At the top of the screen is a **search bar** that looks across customers, products, serial numbers, suppliers and sales at once. For power users, press **Ctrl + K** (or **⌘ + K** on Mac) to open the **Command Palette**, which supports search shortcuts like **sku:00142** or **metal:gold**. Your recent searches are remembered for quick re-use.

TIP

Almost every **customer name**, **product name** and **sale number** in the system is clickable — click it to jump straight to the full record.

Roles & Who Can Do What

There are three roles. They control which menus appear and what each person can create, edit or delete. The Owner can fine-tune Manager and Staff permissions in Settings.

Owner

Owner

Shop owner / administrator

- Full access to everything
- Reports, Analytics & P&L
- Settings & user management
- Pay commission, set rates
- Approve negative-balance sales

Manager

Manager

Store / operations manager

- Full day-to-day operations
- Create, edit & delete stock, customers, sales
- Void & edit sales
- Manage expenses & consignments
- No Settings or Reports*

Staff

Staff

Sales associate / cashier

- View stock & create sales
- Add & create customers
- Add products
- Cannot delete or void
- No Reports, Settings or admin

Detailed permission matrix

Area	Owner	Manager	Staff
Dashboard	View	View	View
Products	Full	Full	Add / Edit
Suppliers	Full	Full	View only
Customers	Full	Full	View / Add
Sales / POS	Full	Full	View / Create
Consignments	Full	Full	View only
Expenses	Full	Full	View only
Reports & P&L	View	—	—
Analytics	View	—	—
Settings & Users	Full	—	—

*The Owner can override Manager and Staff permissions per area (e.g. grant a Manager access to Reports) under **Settings → Team → Role Permissions**.

The Dashboard

The Dashboard is the first screen after login — your business at a glance. What you see depends on your role; owners see profit figures, staff see a simpler view.

Quick actions

Buttons across the top start the most common tasks in one click: **New Sale** **Add Customer** **Log Expense** — plus **Add Product**, **Add Supplier** (managers/owners) and **View Reports** (owners).

What the cards show

Today's Sales & Transactions

Total takings today and the number of sales made.

Gross Profit Today **owner**

Profit after the cost of goods sold.

Items Sold & Inventory Value

Pieces sold today and the total worth of stock on hand.

Recent Sales Feed

Your last few sales — item, payment type, time, amount. Click to open.

Reserved Items

Stock held for deposit orders, with pickup dates. Red badge = overdue.

Pending Trade-Ins

Traded-in items waiting to be processed into stock.

Revenue & Profit Trends **mgr+**

A 7 / 30 / 90-day line chart of revenue vs gross profit.

Purchasing Snapshot

Stock bought this month, inventory age (green/amber/red) and buy-vs-sell.

INVENTORY AGE COLOURS

0–30 days · Fresh

31–90 days · Aging

90+ days · Needs moving

— a quick visual cue for slow stock.

Products & Inventory

The Products area is your complete stock catalogue. Each product carries its price, cost, supplier, photos, documents and live stock count — and the system tracks profit and ageing automatically.

Adding a product

1

Click "Add Product"

Top-right of the Products page. A form opens with collapsible sections.

2

Basic details

Name (required), barcode, description, category, metal, karat, gemstone. The system suggests names as you type.

3

Supplier & source

Choose a Registered supplier (a business) or an Individual (a walk-in seller). You can add a supplier inline.

4

Pricing & stock

Cost price, sell price, reorder threshold (low-stock alert level) and the opening quantity.

5

Extras

Location, photos/videos, registered-watch document, consignment terms, and any certificates.

6

Save

The system auto-generates a SKU and the item is instantly searchable and sellable.

Viewing & managing stock

Switch between **List view** (table) and **Grid view** (cards). Use the **search bar** (name, SKU or barcode), the **sort menu** (newest, name, price, margin) and the **Filters** panel (category, metal, karat, gemstone, supplier, location, price/margin range, age, reservation status). Quick-filter chips below the search bar narrow results in one tap.

Click **View Details** on any product to see stock, pricing, profit and markup, ageing status, reservation info, trade-in origin, photos, documents and consignment terms. From there you can **Edit**, **Duplicate** (copy a similar item), **Adjust Stock**, or jump to **Sell**.

Adjusting stock

Inside a product, click **Adjust Stock** and choose **Add** (delivery arrived), **Remove** (damage/loss) or **Set exact amount** (after a physical count). Enter the quantity and an optional note — a live preview shows *current* → *adjustment* → *new*. Always add a note so the reason is on record.

Barcode scanning

On screens with a **Scan** button, allow camera access and point it at the barcode — the system reads it automatically (or type it manually). Scanning is the fastest, most accurate way to find items at the till.

Status badges you'll see

In Stock

Low Stock

Out of Stock

Reserved

Consignment

Trade-In / PX

Aged Stock

GOOD TO KNOW

Barcodes must be unique — the system won't let you reuse one. You can't delete a product that has been sold or has active reservations/consignments; that protects your history.

Suppliers

A supplier is anyone you source stock from. The system tracks every product, purchase and consignment per supplier, and shows your total spend over time.

Two types of supplier

- **Registered Supplier** — a business (wholesaler, distributor, jeweller) with full contact details. Appears in dropdowns while marked Active.
- **Individual Supplier** — a walk-in person selling or trading in an item; name-only, no ongoing account.

Adding a supplier

Click **Add Supplier** and complete the tabbed form: **Details** (type, name, contact person), **Contact** (email, phone, address) and **Extras** (Active toggle, tags, notes). Tags such as **Wholesale** **Local** **Premium** help you organise and filter suppliers.

The supplier profile

Click **View Detail** to open a full profile with tabs:

Tab	What it shows
Overview	Contact details, spend trend, recent activity, consignment summary.
Inventory	Every product from this supplier (filter In Stock / Sold / All).
Financials	Total spend this year (purchases + expenses) with a monthly chart.
PX History	For individuals — items this person has traded in and the allowances given.
Consignments	Active stock, sold-but-unsettled items, and settled payouts.
Documents	Contracts and account agreements attached to the supplier.

The Suppliers list itself can be searched, sorted (name, recently added, highest spend, most products) and filtered by type, status and tags, in card or table view.

08 Consignments

A consignment item is stock you hold but don't own. You sell it, keep your agreed margin, and pay the supplier (the consignor) only once it sells. The system tracks the whole lifecycle — from intake to settlement.

Setting up a consignment item

When adding the product, switch on **Consignment Item**, choose the **consignment supplier**, set the **start** and **end** dates, enter the **terms** (e.g. "50/50 split" or "supplier gets £x"), and upload the signed **agreement**.

The Consignments page

Summary cards show Active Stock, Unsettled Sales, Pending Payouts (£ owed), Total Consignment Value and Total Settled. Three tabs organise the work:

Tab	Contains	Action
Active Stock	Items held now, with status (Active, Expiring Soon, Out of Stock).	View · Export
Sold & Unsettled	Sold items awaiting payout; flagged Overdue after 30 days.	Record Payout
Settled	Completed payouts with date and reference.	View · Export

Recording a payout

On an unsettled sale, click **Record Payout**. The dialog shows the sale price, your margin and the amount owed. Confirm or adjust the payout amount, choose the **payment date**, add a **settlement reference** (e.g. bank transfer ID) and click **Record Payment**. The item moves to **Settled**.

WHY IT MATTERS

The Reports area warns you of any **unsettled consignments** so you never lose track of money owed to a consignor. Settle promptly to keep relationships and records clean.

Customers (CRM)

Build a profile for every customer. The system tracks their spend, purchase history, sizes and preferences, and automatically promotes them through VIP tiers — so you can give personal, informed service.

Adding a customer

Click **Add Customer** and complete three tabs: **Basic Info** (name required; email, phone, address, notes), **Special Dates** (birthday, anniversary — these trigger dashboard reminders), and **Preferences** (ring/bracelet/necklace sizes, metal and style preferences). You're taken straight to their profile.

The customer profile

Each profile shows four headline stats — **Lifetime Spend**, **Total Purchases**, **Average Order Value** and **Member Since** — plus a progress bar toward the next VIP tier, and three tabs: **Overview** (contact & dates & quick notes), **Purchases** (full transaction history) and **Preferences**.

VIP tiers — set automatically by lifetime spend

Tier	Typical threshold*	Use it to...
Standard	£0 – £499	Everyday customers
Silver	£500 – £1,999	Recognise returning customers
Gold	£2,000 – £4,999	Offer premium service
Platinum	£5,000+	Invite to VIP events

*Thresholds are set by the Owner under Settings → Sales. Tiers update automatically — they are never set by hand.

Finding & filtering

The Customers page shows totals plus upcoming **birthdays** and **anniversaries**. Filter by VIP tier, lifetime spend, purchase count, metal preference, upcoming events, or whether they have an email/phone. Archive (rather than delete) old customers — their purchase history is always preserved.

SERVICE IN ACTION

Filter by "Birthday in next 30 days", open the customer, tap their phone number to call, and suggest a piece in their preferred metal and size — all from one screen.

Point of Sale (Selling)

The POS is where you complete a sale. It has three panels — Product Search (left), Shopping Cart (middle) and Checkout (right) — and two modes at the top: **Complete Sale** and **Deposit Order**.

The standard sale flow

Adding & editing items

Search by name, SKU or internal SKU and click **+**. The cart shows stock status (Available, Reserved, Last one, Out of stock). In the cart you can change quantity with **+/-**, edit the unit price with the **pencil** (green = lower than catalogue, red = higher), remove a line with the **bin**, or click the name for details.

Discounts

In the Checkout panel, set a discount as a **percentage (%)** or a **fixed amount (£)**. Discounts are spread across the items and applied before tax. Trade-in allowances are never reduced by a discount.

Cart totals explained

Line	Meaning
Subtotal	All items × quantity at their unit prices.
Discount	Amount taken off (see above).
Tax	Calculated on (subtotal – discount).
Net Total	Subtotal – discount + tax – trade-in allowances = what the customer pays.

Customer, payment & staff

Enter a customer name (look up an existing customer to auto-fill, or just type "Walk-in"). Choose a **payment method** — Cash, Card, Bank Transfer or Other; cash is recorded in the **Cash Drawer** automatically. The sale is recorded against you (*Processed By*) for commission and reporting.

Shop location

Once you add an item, the sale locks to that item's **location** — you can't mix products from two locations in one sale. To sell from another location, finish the current sale first.

Optional: signature

For high-value sales or store policy, click **Capture Signature**, have the customer sign on screen, and **Accept**. The signature is stored with the receipt.

OWNER APPROVAL

If a trade-in allowance is larger than the sale (a **negative balance** — you pay the customer), **Staff** cannot complete it; the screen shows "Requires Owner Approval". A Manager or Owner must approve.

After the sale — and reviewing it

A confirmation appears with the sale number and options to **Print Receipt**, **Email Receipt**, **Download PDF** or start a **New Sale** (the location is kept for convenience). You can revisit your own sales any time under **My Sales**; managers see all sales under **Transactions**.

Editing & voiding (Manager+)

From **Transactions**, managers can **Edit** a sale or **Void** it (with a reason). Voiding reverses the revenue, returns the stock and reverses commission — the sale is kept on record, marked VOID, never deleted.

Sales views at a glance

View	Shows	Who
My Sales	Your own sales, revenue & estimated commission.	Everyone
Transactions	All sales from all staff, with edit/void/export.	Manager+
Sold Items	Every individual item line sold, with profit & commission.	Manager+

Trade-Ins / Part Exchange

A trade-in (part exchange) is when a customer hands over an old item for credit against a purchase. The system records the item, deducts the allowance from the sale, and then lets you process it into saleable stock.

Taking a trade-in at the till

In the cart, click **Add Trade-In** and record: item name (required), category, description, serial number, the **allowance** (the credit given — required), the customer's details, notes and photos. It appears in a blue "Trade-Ins" section and is **subtracted from the sale total**. Example: £1,200 sale – £500 trade-in = **£700** to pay.

Processing trade-ins into stock

Traded-in items wait in the **PX Intake** queue (Products → PX Intake, Manager+). From there:

1

Review the queue

See all pending trade-ins with value and age.

2

Decide

Convert to inventory, **Edit** the details, or place **On Hold** (needs servicing, authentication, cleaning, valuation, etc.).

3

Convert to product

Set the selling price, category, SKU and condition notes, optionally link a supplier, then Create Product.

4

Now sellable

The item joins your inventory, ready to sell — carrying its trade-in origin.

BEST PRACTICE

Always photograph trade-ins and record **serial numbers** on watches and high-value pieces. Check with a manager before offering a large allowance.

Deposit Orders (Layaway)

A Deposit Order lets a customer reserve items and pay in instalments. The stock is held aside so it can't be sold to anyone else until they've paid in full and collected.

Creating a deposit order

In deposit mode you can also **Add Custom Item** (name, quantity, price, tax rate) for bespoke pieces not in the catalogue. Discounts are not used on deposit orders. Enter the customer, the **initial payment** (the screen shows total, deposit % and balance due), the payment method, location and any notes, then **Create Deposit Order**.

Taking later payments & completing

On the **Deposits** page, find the order and use the row actions: **Record Payment** (£ icon) for each instalment, **Edit** (change items, customer or pickup date), **Complete** (✓ — only once fully paid; converts it into a finished sale), or **Void** (releases the reserved stock).

Deposit order statuses

Active not yet fully paid **Completed** paid & converted to a sale **Cancelled** **Voided** **Expired**

Each order shows a payment progress bar, balance due, expected pickup date and overdue warnings. Switch between List and Grid views and search by customer or order number.

13 Receipts

A receipt is created automatically for every sale. It carries your store branding and full transaction detail, and can be printed, emailed or saved as a PDF.

Three ways to deliver a receipt

PRINT	EMAIL	PDF
Click Print Receipt	Click Email Receipt	Click Download PDF
Formatted for thermal or A4	Confirm the address	Saved to the device
Hand to the customer at the till	Add an optional message & Send	For archiving or later sending

Receipts are reachable from the post-sale confirmation, and from the printer/envelope icons on **My Sales** and **Transactions**. Each receipt shows the store details, sale number, date, items, subtotal, discount, tax, any trade-ins, the total paid, payment method, customer, the staff member, notes and any captured signature.

DEFAULT BEHAVIOUR

The Owner can set, under **Settings → App → POS**, whether the print dialog opens automatically after checkout and whether an emailed receipt is offered by default.

14 Commission

When commission tracking is switched on, the system calculates what each staff member earns on their sales, tracks what's been paid, and lets the Owner record payments.

How it's calculated

Commission is a percentage of either **revenue** (the sale total) or **profit** (sale minus cost), at a rate set by the Owner. Individual staff can have their own override rate.

Basis	Example	Result
Revenue @ 5%	£1,000 of sales	£50 commission
Profit @ 10%	£500 sale, £300 cost → £200 profit	£20 commission

Staff view — My Commission

Each person sees their own monthly breakdown — sales count, revenue, commission owed, and how much is **Paid** / **Partial** / **Unpaid**. "View Sales" opens the underlying sales for that month.

Owner view — paying commission

Under **Reports** → **Commission**, expand a month to see each staff member's figures. Click **Pay Commission** to record a payment (amount, method, notes), or **Pay All** for the whole month. Set the default rate and basis, and per-staff overrides, via the **Settings** (gear) icon. A **History** view lists every past payment, and the data can be exported to CSV.

Expenses

Record every business cost — rent, utilities, wages, marketing, repairs and stock purchases — attach receipts, and let recurring costs create themselves automatically.

Recording an expense

Click **Record Expense** and enter the description, amount, date, category, optional supplier, payment method and notes. If VAT-registered, tick **Include VAT** and pick the rate (0/5/20%) — the system splits out the tax automatically (or enter a manual VAT amount). Tick **Mark as COGS** if the cost is directly part of stock you sell (this affects profit). Drag in up to five receipt files, then **Save**.

Recurring expenses

For regular bills, tick **Make Recurring** and choose the frequency (weekly, monthly, quarterly, annually) and next due date. The system then creates each copy automatically. Recurring rows show a **Recurring** badge with pause, resume, edit and stop controls.

Finding & exporting

Filter by date range, category, supplier, staff member, payment method, amount range, or COGS/recurring only. Summary figures show this month, this year, total records, monthly average and year-on-year change. **Export** any period to CSV or PDF, and review the built-in category and monthly-trend charts.

COGS VS OPERATING COST

COGS (cost of goods sold) reduces *gross* profit; **operating expenses** (rent, marketing, wages) reduce *net* profit. Marking expenses correctly keeps your P&L accurate.

Reports & P&L

The Reports area (Owner) is the financial heart of the business — a live Profit & Loss statement plus commission, product, supplier and consignment reporting, all filterable by date and exportable.

The Profit & Loss statement

**Revenue**

All sales after discounts.

**COGS (cost of goods sold)**

What the items cost — wholesale price, trade-in allowance, or consignment payout.

**Gross Profit**

Revenue – COGS. Shown with Gross Margin %.

**Operating Expenses**

Rent, utilities, wages, marketing — every non-COGS cost.

**Net Profit**

The bottom line — what the business actually keeps. Shown with Net Margin %.

Pick a date range, review the KPI cards and the revenue-vs-profit chart, expand the expense breakdown by category, and **Export CSV/PDF** for your accountant. A banner alerts you to any unsettled consignments.

The other report tabs

Tab	Answers
Commission	What each staff member has earned and been paid (see §14).
Products	Best and worst sellers, units sold, by period.
Suppliers	Total spend and order count per supplier.
PX & Consignment	Pending settlements and settlement history.

Analytics, AI & Audit

Beyond reports, the system offers deeper analytics, a built-in AI assistant you can simply ask questions, and a complete audit trail of every change.

Enhanced Analytics (Owner)

Tabs cover an **Overview** (product performance, supplier analysis, system activity, stock health), **Product Mix** (profitability by product), **Suppliers** (in-depth spend analysis), **Audit Trail**, and **Alerts** (out-of-stock and low-stock items).

The AI assistant

Click the **chat bubble** in the bottom-right corner and ask plain-English questions about your business — it pulls live data and can show mini-charts. For example:

- "How much did I spend on marketing this month?"
- "Which product is our best seller?"
- "What's my profit margin this year?"
- "How many items are out of stock?"

Be specific for the best answers, and ask follow-up questions in the same conversation.

Audit trail

Every create, edit and delete is logged with **who, when, what changed**, and the old & new values. Filter by area, action, person or date, toggle **financial changes only** to spot price edits, click any row for the full before/after, and export to CSV. This is your safeguard for accountability and accuracy.

Cash Drawer

The Cash Drawer tracks physical cash per location, so you can reconcile the till at the end of the day. Cash sales feed in automatically.

Daily use

- **Set Float** (Owner) — set the expected opening balance at the start of the day, e.g. £200.
- **Add** — record cash put in (petty-cash top-up, cash back from the bank).
- **Remove** — record cash taken out; a **reason is required** (bank deposit, petty-cash spend).
- **History** — a full timeline of every movement with amounts and notes, for reconciliation.

Each shop location has its own drawer card showing the current expected balance and when it was last updated.

Settings & Admin

Settings is the Owner's control centre. It's organised into tabs — Account, Team, Business, App, Sales, Customise and Data.

Tab	What you control
Account	Your name, bio, profile picture and password. All users
Team	Add / edit / remove users, set their roles, and customise Manager & Staff permissions.
Business	Store name, tagline, address, phone, email (shown on receipts) and store locations.
App	Currency, timezone, low-stock threshold, stock-tracking rules, and POS defaults (payment method, receipt behaviour).
Sales	VIP tier thresholds and commission settings (rate, basis, per-staff overrides).
Customise	Quick-filter presets, custom filters, and supplier tags.
Data	Import / export (products, suppliers, expenses), install the app, replay onboarding.

Managing the team

1

Add User

Settings → Team → Add User. Enter name, email, password (or Generate one) and a role.

2

Share the login

Note the email & password shown — the password is only displayed once. Give it to the team member securely.

3

Adjust later

Edit the name, change the role (with confirmation), or remove access entirely — all from the user table.

Customising role permissions

Under **Team → Role Permissions**, pick the **Manager** or **Staff** tab and toggle View / Create / Edit / Delete per area. A yellow dot marks a custom override; **Reset to Defaults** restores the standard rules. Owner permissions can't be reduced.

Multiple locations

Under **Business → Store Locations**, add each shop or stockroom (name, address, active toggle). Stock, cash and sales are then tracked per location.

Shortcuts, Install & Offline

Keyboard shortcuts

Shortcut	Action
Ctrl / ⌘ + N	New Sale
Ctrl + Alt + P	New Product
Ctrl / ⌘ + K	Search / Command Palette
Ctrl / ⌘ + S	Save
Enter / Esc	Confirm / cancel an inline edit

Install as an app (PWA)

Under **Settings** → **Data** → **Install App**, click **Install** to add Sourced CRM to a device's home screen or desktop. It then launches in its own window, loads faster and works like a native app — ideal for a shop tablet.

Working offline

If the internet drops, an indicator appears bottom-right: previously loaded data stays viewable, but **checkout and live syncing are disabled**. When the connection returns, the app reconnects and syncs automatically.

DURING AN OUTAGE

You can still look up products, customers and past sales, but you **cannot complete a sale** until you're back online. For a planned outage, take manual notes and enter the sales once reconnected.

21 Glossary

Term	Meaning
SKU	Stock Keeping Unit — the internal code auto-generated for each product.
COGS	Cost of Goods Sold — what your stock cost you; reduces gross profit.
Gross Profit	Revenue minus COGS.
Net Profit	Gross profit minus operating expenses — the bottom line.
Margin / Markup	Margin = profit as a % of sell price. Markup = profit as a % of cost.
Net Total	The final amount a customer pays, after discount, tax and trade-ins.
Part Exchange / PX / Trade-In	An old item taken in for credit against a purchase.
Allowance	The credit value given for a trade-in.
Consignment	Stock you sell on behalf of someone, paying them only once it sells.
Consignor	The supplier who owns a consignment item until it's sold.
Settlement / Payout	Paying a consignor for a sold consignment item.
Deposit Order	A layaway order — items reserved and paid for in instalments.
Reserved	Stock held aside for a deposit order; not available for general sale.
Void	Reverse a completed sale — returns stock, removes revenue, reverses commission.
Walk-in	A customer with no saved profile.

Term	Meaning
VIP Tier	Standard / Silver / Gold / Platinum — set automatically by lifetime spend.
Float	The opening cash balance set in the till at the start of the day.
PWA	Progressive Web App — the system installed like a native app on a device.
